Effective Remote Collaboration Gets Easier

PaperVision.com offers information management at a *simple per-user, feature-based price*

Greenwood Village, CO– March 31, 2020 –Across the globe, more and more individuals are heading home to work in the wake of shelter-in-place and quarantine orders. But, effective telework requires more than simple file store and share systems, which quickly become just as cluttered as your traditional filing cabinets in the office. Remote workers are discovering that collaboration is tough with tools designed to enable communication but not to share files when they're not seated side-by-side.

Today, Digitech Systems announced the availability of PaperVision.com, which offers instant, secure access to critical business records from any location. The cloud-based service also includes business class features like process automation, integration, and e-forms in a simple per-user pricing model, bringing true cloud information management to more businesses during this critical time.

Since 1999, Digitech Systems has become well-known for securely managing sensitive information for thousands of companies, including the Fortune 500, in their existing cloud Enterprise Content Management (ECM) service, ImageSilo®, so they have more than twenty years of experience maintaining information security and system reliability in the cloud—even during times of limited services and availability. PaperVision.com brings the same cloud and cyber security expertise at a per-user, feature-based price.

Keypoint Intelligence awarded PaperVision.com as the Outstanding Cloud Content Management Service for 2020, citing its easy to use and sensible feature sets and the simple, straight-forward pricing among the product's strengths. The evaluators also noted the product's ability to "help people...get their jobs done."

"With the launch of PaperVision.com, Digitech Systems makes full-featured Enterprise Content Management (ECM) available in the cloud at a per-user, feature-based price. In recent years, so much attention has been given to content collaboration tools in the cloud, while Digitech Systems' "System of Record" is a more effective approach to handling the enormity of business data, which continues to grow at an alarmingly fast pace."

~Jamie Bsales, Director of Solutions Analysis, Keypoint Intelligence

PaperVision.com is available in three feature groups, all of which can be used to store scanned documents, images, and more than 250 types of electronic files. Choose from the following options depending on your business needs:

- Basic – Perfect for five or fewer users, the basic option includes standard upload, organization, and secure retrieval capabilities. It is similar to other file sharing products.
- Professional – Available for an unlimited number of users, the professional option builds on the basic features by adding electronic signatures, automated document retention and destruction, audit tracking, and more sophisticated security settings.
- Enterprise – At the enterprise level, PaperVision.com includes all of the features of both the basic and professional options. In addition, enterprise users can setup even more detailed security policies, automate processes, manage email messages and Enterprise Report Management (ERM) data, and create custom e-forms to capture information electronically.

By converting from paper invoices to digital records kept in PaperVision.com, the accounts payable team at Seafood Producers Cooperative was able to reallocate square footage previously used for filing cabinets, saving \$891,000 annually. They've also streamlined invoice processes, which has been

especially helpful as workers have moved to remote working from home scenarios. “We’re in PaperVision.com all day long. We find it very easy,” explained Georgia Pelton, AP Administrator.

“We provide information access and security to healthcare, financial, education, and government customers, so our business is included in the Critical Technology Infrastructure Sector by the Department of Homeland Security. We take our responsibility to provide easy-to-use and effective information management software and services very seriously. Though we’d planned this launch well in advance of the current situation, we know we can help people who are looking for affordable ways to enable remote and telework while giving employees the ability to maintain social distancing,” said HK Bain, CEO of Digitech Systems. “PaperVision.com brings a new level of capability and sophistication, beyond mere collaboration, to organizations who want to purchase cloud-based content management at a per-user, feature-based price. Now you won’t have to compromise features or information security to easily enable work-at-home. PaperVision.com makes it simple and more affordable than ever to get started.”
